Object Detection  $\rightarrow$  RCNN (Object Detection & Localization)

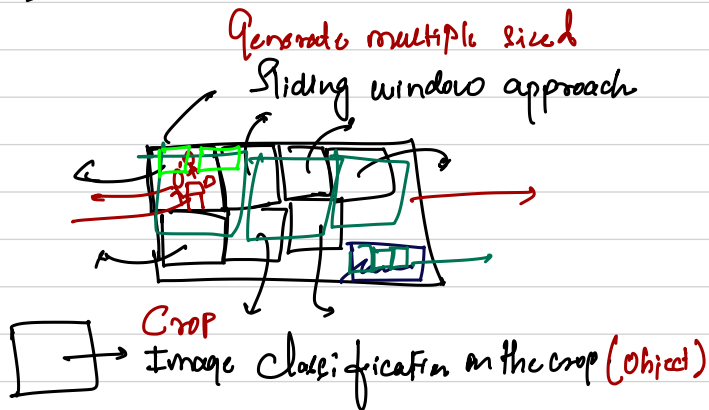

Annotation Tools (Robotlous)

Rcnn

FastRcnn  
Faster Rcnn  
YOLO.  
SSD

Rcnn

Problem?

Generate many crops by taking in the sliding window (different sizes)

Region Proposal

Rcnn

Sliding window  
Selective Search

Clustering or

grouping  
pixels

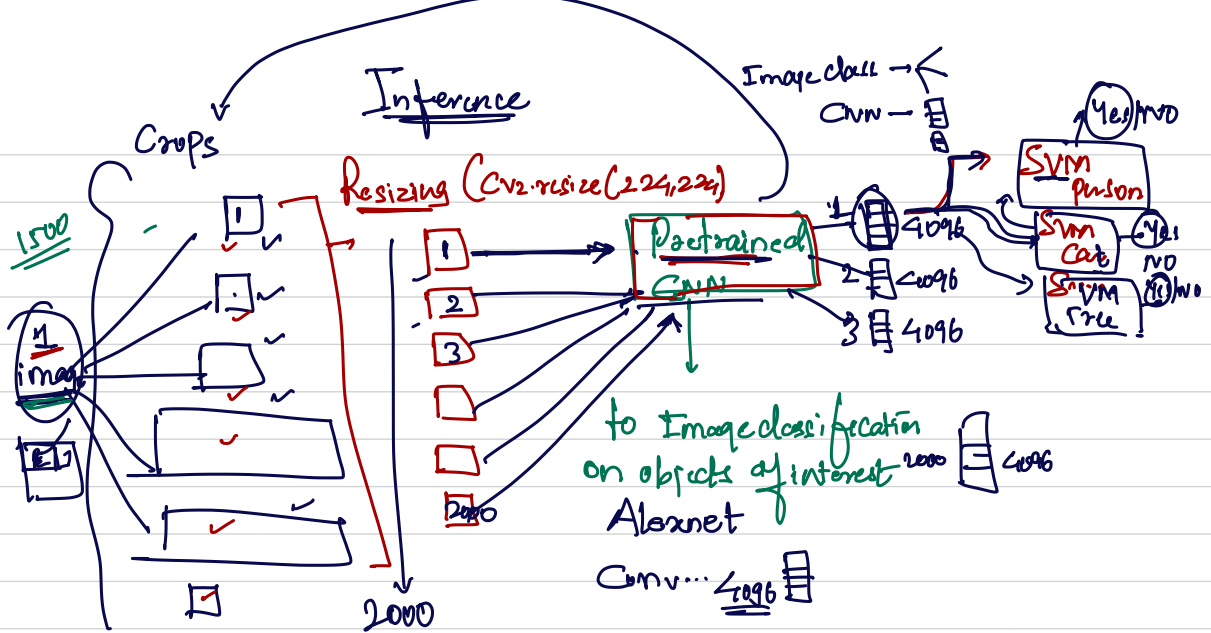

to generate

segments

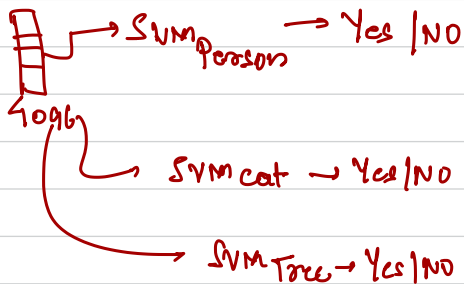

→ Region proposals

① Generation of region proposals

② Algorithm to apply for classification

You have one SVM to detect each object of interest

Pretrained CNN is an algorithm which is capable to detect / classify given an object (Image Classifier)

Person Cat Tree

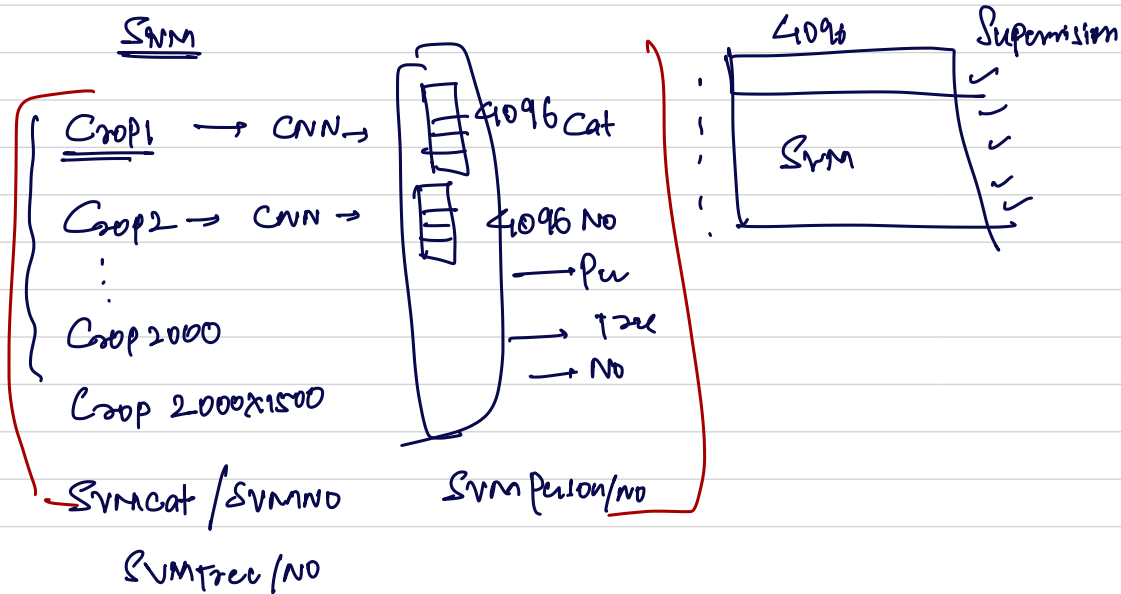

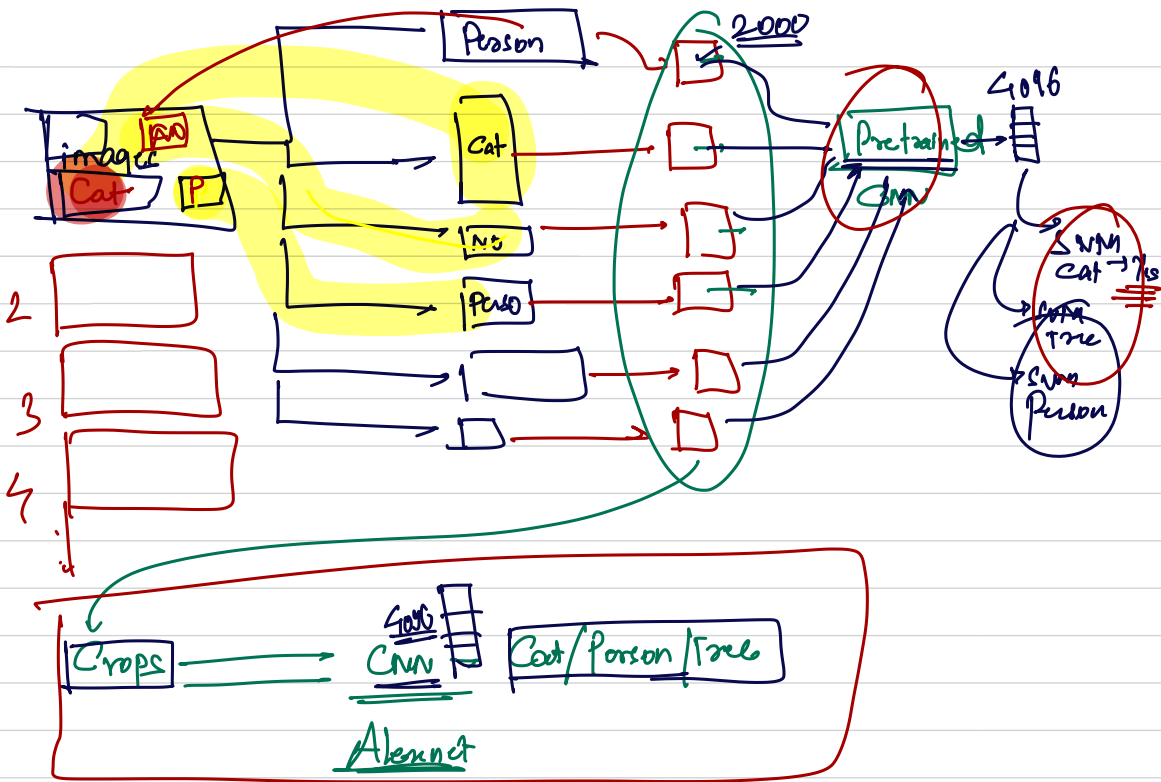

Pre-trained CNN:

- Given the crops that you generate from the images you train a CNN to detect a multi-class image classification problem

SVM cat SVM Person, SVM tree

## Inference Pipeline

## Cleanup

Non-max suppression  
 Tell me the highest confident  
 crop of the object class: Person  
 all crops which are overlapping  
 with the real crop, get eliminated
